WHITE PAPER

Our Story

Our passion for crypto stems from an interest in productive time-based investments. We see the future of finance moving toward that which can be used in a wide variety of ways, rather than those which are limited to a few applications. Our goal is to create safe and reliable opportunities for those who are interested in gaining exposure to the crypto market without having to invest large amounts at once. From the moment we realized that the current market environment had a gap in it, we went all in and dedicated ourselves to becoming experts on the subject. Consequently, we discovered how this new phenomenon worked and how to exploit it. A name was then added to reflect our findings!

Our Mission

We look to provide our investors with stable consistent returns beyond the traditional financial world. We all know the power of bonds, real estate, indexes, and the security they can provide. We envision a world in which wealth-building technologies are made available to the general public, restoring people's authority over our financial institutions. To encourage more people to participate in digital assets, the PEACEGIGA will create economic value to facilitate future growth in the digital space. The essence of our philosophy is to develop a culture of digital currency literacy. The PEACEGIGA Building is a safe and secure platform that can be used anywhere in the globe with no limits, allowing users to make a profit by holding while maintaining their privacy, security, and autonomy. We seek to create an ecosystem using the PEACEGIGA platform that is built on sound monetary rules and to provide an asset that is mobile, transferable, and a safe store of value for the population.

Security & Transparency

Perfection is something we as humans always strive for; however, when it comes to security and transparency - anything less is unacceptable. We at PEACEGIGA have a three- step approach to accomplishing this. We aim to set a precedent on the level of detail this process should entail. Fundamentally, cryptocurrency was created with the purpose of creating decentralized economic freedom; where we the people have the power and privacy. However, when trusting an organization with any financials, we believe it is imperative to hold someone accountable. We know actions speak louder than reputations, but we still want to put ours on the line, ensuring we are doing everything in our capacity to make this project succeed. For this reason, we are a publicly identified team with every member of our organization's profile and identity known to our investors. In the crypto space, we call this being DOXXED.

Now that our profiles are out there, the next aspect of security becomes our code. As PEACEGIGA is a unique project built from the ground up - we believe it is imperative to make certain all aspects of our code are as safe as humanly possible. We achieve this by having an internal debugging team of some of the best programmers in the space. Next, we send our code to the community where they give it their best shot to break our code and we'll in fact reward them if they are able to do so. Finally, we have partnered with the highest regarded auditing company in the crypto space Certik to make sure we have done everything possible to secure our code and protect our investors. This leaves one thing for certain, transparency. We want to provide our community with the framework to tap into blockchain technology and the tools available to watch our project funds. An amazing aspect of blockchain technology is the ease of access to tracking mechanics. Through this technology and our Gnosis multi-sig wallet, our users will not only have the safety but the security and clarity to track at all times.

Art & Technological Innovation

Art and technology have always been viewed as two opposites of a spectrum, so how could these worlds ever merge together? Well, we believe we accomplished this conjunction by adding financial structure behind beautiful, bold, and emerging works of art. We are jubilant over the thought that PEACEGIGA is just this - a place where Finance, Technology, and Art merge in harmony. We have implemented mechanics that allow the project to truly create uniqueness in pure adaptation to market circumstances, specifically our monthly NFT pools. Each pool can contain complete independence, specific to the conditions of both the market, as well as, the health and growth of the project. However, the one common core principle that shall remain, is the complete and total return on the original investment in about 80days' time.

Investment Strategy

PEACEGIGA is a protocol aimed to provide users with fixed returns utilizing inflow/outflow mechanics in combination with state-of-the-art fund allocation and trailblazing asset pairing on top of the base layering of NFTs. Now you might be asking yourself, what does that even mean. On a high level, using statistical co-efficient modeling we have created a cutting-edge formula that utilizes blockchain mechanics to stretch each dollar as far as possible while remaining secure and diversified. Our investments are broken down into four components. Let's break these down.

First being traditional crypto investments, with taking advantage of opportunities in the market that arise, and using asset pairing to maximize this effort. This "bucket" will entail everything from blue chips to DeFi to NFTs and everything in between.

Next, our second type of investment is aiding project start-ups. We understand the key dynamics and difficulty of this process and will be partnering with projects to aid them through. Once vetted through our extensive background check, we can provide them with early rounds of funding.

Investment Strategy

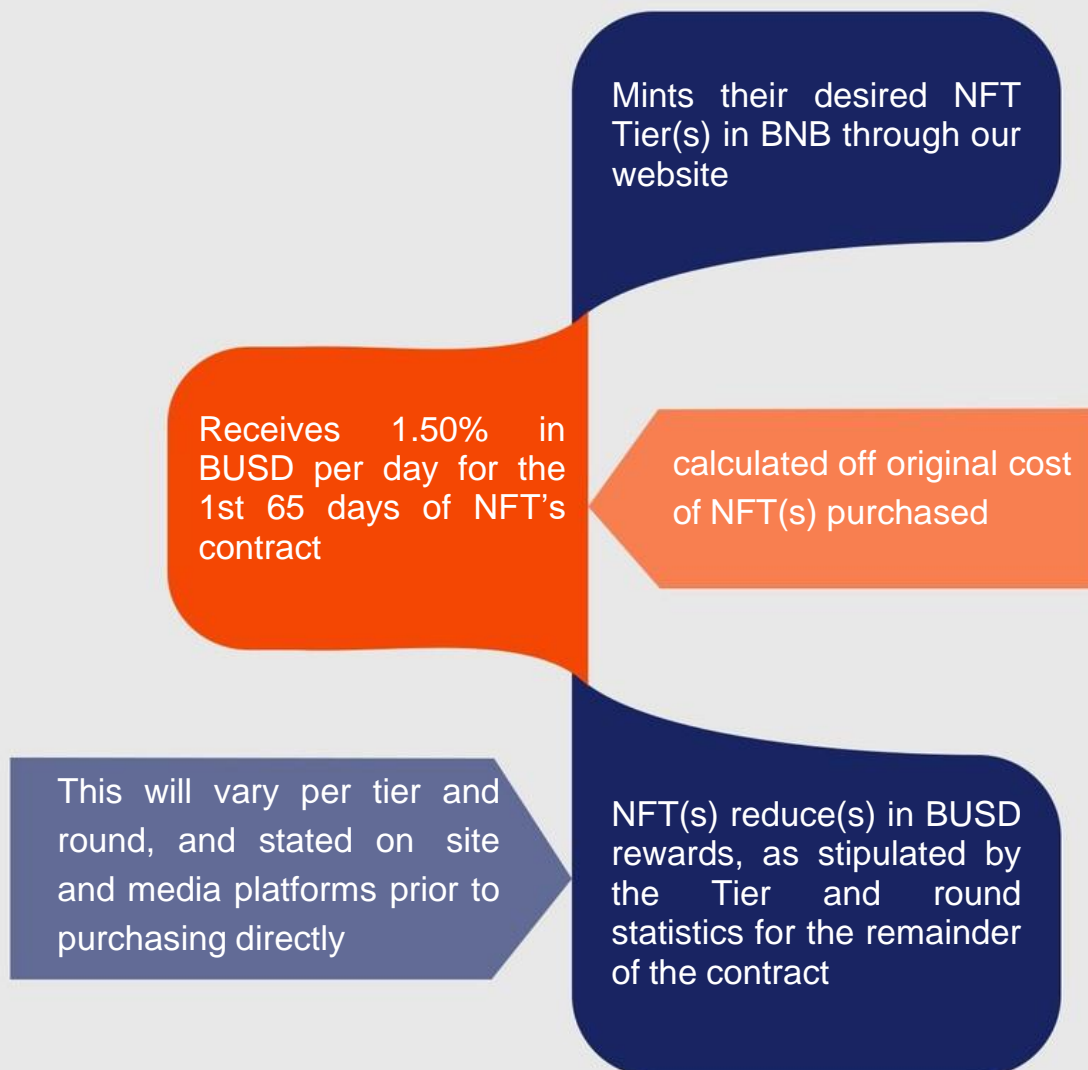

Our third style of investment will be acting as a financial bridge and on-ramp for smaller real-world companies in the community to incorporate the financial and technological power of crypto through our resources.

Finally, our fourth layer of investments and personally the one I'm most excited about. Imagine you had an idea - that can change the world. We at PEACEGIGA would like to provide you with the opportunity to bring it to market in 80 days. We have every resource in-house for R&D, full-stack developers, blockchain developers, designers, and any other possible resource needed to make your vision a reality. We are tapping into the top networks available. From colleges like Harvard and Princeton to top companies like Amazon and Microsoft, we can use the resources, in which our team is rooted, to make visions a reality. We look to create an ecosystem of projects looking to fill any gaps we vision in the space. The first gap we look to tackle is creating a major NFT marketplace in the Binance Smart Chain ecosystem along with providing a faucet, much like spooky swap has done on the Fantom Network.

Solution

Front End - Flow Diagram Investor's POV

Front End - Flow Diagram

Example 1:

(Based on statistical numbers from our Launch Group)

Joe mints a NFT1 worth \$2,000 in BNB + gas fees

When the Launch Group starts on April 1st, Joe will receive 1.50% a day in BUSD for 65 days.

1.50% of \$2,000 = \$30/day for 65 days)

(1.50% * 65 days = ~ 100% Return on initial investment)

Joe's NFT1 on day 66 reduces to producing a daily percent rate (DPR) of 0.7% a day for 300 days.

(Joe's 1 NFT would profit him a 307.5%

return worth over \$6,150)

Joe was made aware of the specific Phase of returns on his NFT before ever purchasing

Joe has now held his moneymaker NFT1 for a full year. It reduces its DPR to 0.3% a day for its final 365 days of protocol yield.

(Joe makes an additional 109.5% in his 2nd year holding his favorite NFT)

Joe invested \$2,000. Received \$2,000 in 65 days Held for the entire 2 years of yield returns and ended with \$8,340, an over 4x profit!

PEACE

Front End - Flow Diagram

Example 2:

(Based on statistical numbers from our Launch Group)

Joe Astronaut mints a Dog Tier NFT worth \$2,000 in BNB + gas fees

Joe makes his 1.5% per day return for the 65 days but decides after reaching breakeven that he would rather go risk on with the market and get extra liquidity to do so. Joe sells his NFT on the open market for \$1,000 to Genna-Mae Investor (or GMI for short).

Joe invested \$2,000, He exited with his \$2,000 back + the \$1,000 for selling to GMI - gas fees and royalty fees that funded the protocol's treasury

GMI invested \$1,000 into the protocol on the NFT and began receiving 0.7% DPR on the original NFT's price of \$2000. (\$14.00 a day up for 300 days until 365 days of the NFT's protocol release)

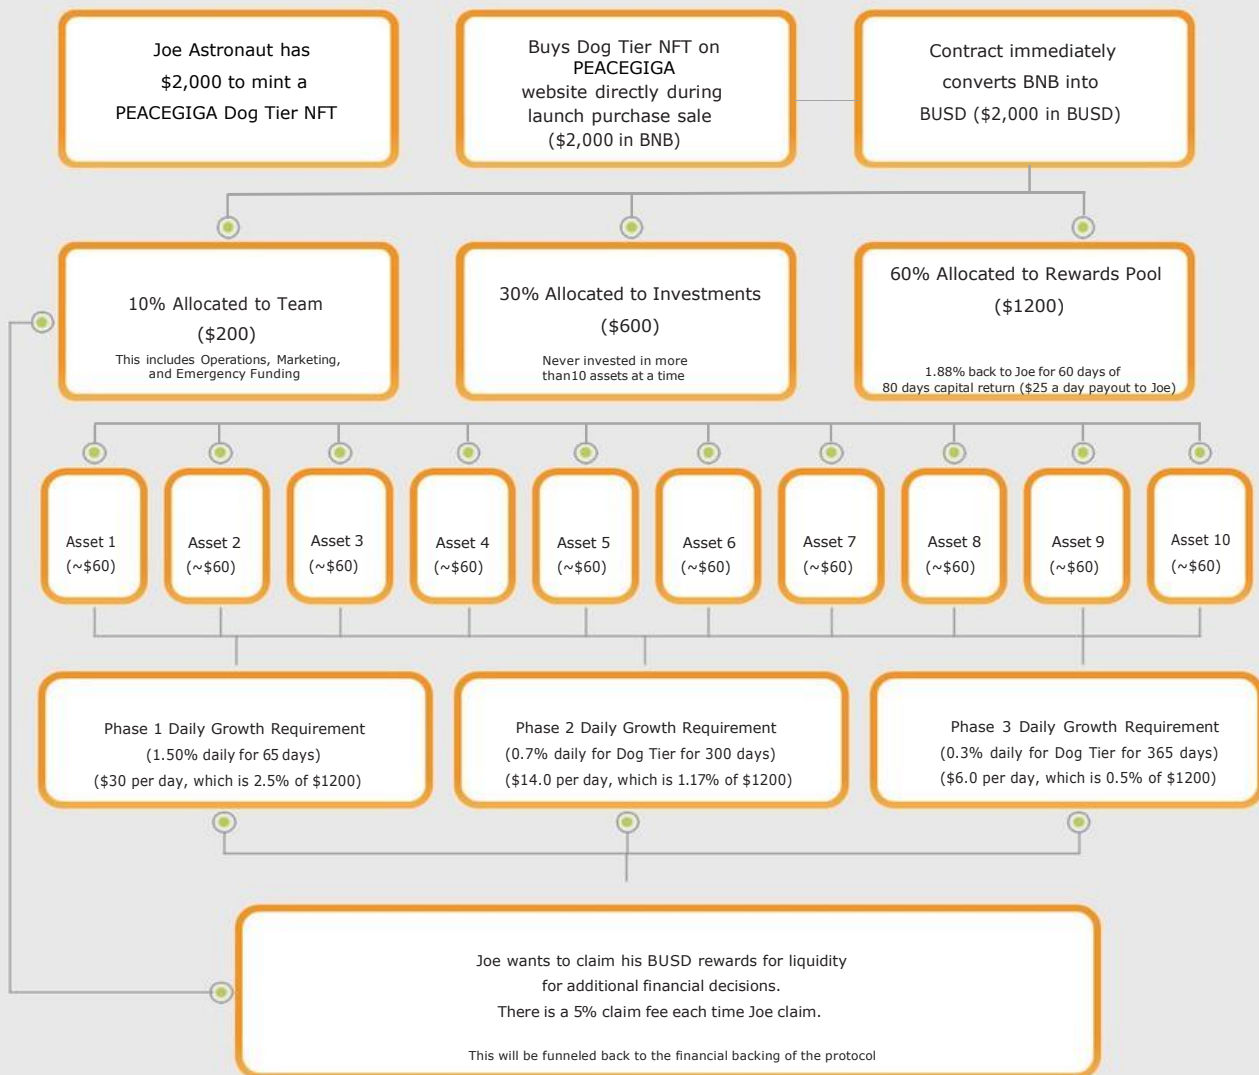

GMI continues to hold her moneymaker NFT for the entire 2nd year of the NFT's contract at a DPR of 0.3% of the original \$2,000 price.

GMI earns \$6,018, covering her full initial investment without counting her profits from the previous step

In the end, both Joe and Genna-Mae were profitable investors at PEACEGIGA.

Back End - Flow Diagram

***This is a backend example for the Dog Tier NFT in our Launch Group round. Please be advised all numbers and structure are subject to change with each NFT round and will be made clear and transparent prior to each new round. **

FAQs

General

1) What is PEACEGIGA?

PEACEGIGA is an Income generating NFT project.

2) How to mint NFTs?

Our NFT's can be found once "Mint & Earning" tab is pressed. New NFT's will be released on the first of every month.

3) What token are your rewards given in?

All our investors will receive daily rewards in stable coin.

4) Are you guys safe?

We believe we have taken every precaution possible to make our investors as protected as possible. This includes having a publicly DOXXED team as well as audited code. Our full safety plan is highlighted in our white paper.

5) What is the artistic value of your NFTs?

The artistic value of our NFT's vary from tier to tier. Some may be created by your favorite artist, contact creator or brand.

6) What's the value of making the NFT sellable?

The value behind having sellable NFT's the second they are minted is these gives our users the ability to cash out at any point of their choosing. Giving true ownership to the users.

7) Is this a Passive Income Project?

Yes! this is what's beautiful about PEACEGIGA. Once you buy an NFT you receive daily rewards with no input needed from the user. Allowing our users to live life to its fullest without needing to constantly check their computer.

8) Can I invest in PEACEGIGA from anywhere in the world?

Yes! This is one of the many beauties and powers of crypto as a whole.

9) Why don't you have a token?

Let's break this down. A crypto project is built to either solve a problem or further innovation, with that typically comes an accompanying token. Now sometimes the utility of the token is very clear like Bitcoin; it has a direct purpose. In other case it may not have a direct utility lacking true purpose. In some of these cases creators will have a token for the sole purpose of making money.

10) Is PEACEGIGA technologically more advanced?

Art and technology have always been viewed as two opposites on a spectrum, how could these worlds ever merge together? We complete this merge by adding financial structure behind beautiful, bold and emerging works of art. Jubilating ourselves on the thought that PEACEGIGA is just this - a place where Finance, Technology and Art merge in harmony. As a project we pride ourselves on having a plan for every facet - reacting to market dynamics is key however, one must never be reactionary. Projects must be able to innovate on a dime whenever needed. We have created mechanics to allow for this continued innovation such as having monthly NFT drops with new value propositions. Allowing us to always be one step ahead - creating the most impactful products alongside our community.

Sustainability

1) How is PEACEGIGA able to produce higher consistent/fixed returns beyond traditional investment products i.e. stock, bonds, mutual funds, real estate, etc? And why would I want to invest in PEACEGIGA?

When analyzing how PEACEGIGA can beat out returns given by stock, bonds, mutual funds & real estate. We must understand at a core fundamental level how this work. Every aspect of these investments is controlled by a bank, government, or some form of a centralized authority figure whose purpose is to make as much money as possible. Now they have their reasons for this, but at the end of the day, the bottom line is always money. With bureaucracy in its current form, change is always several steps behind, if possible, at all. However, the blame is on the operational level - it's simply how they were created. We are able to gain the upper hand and beat these investments as our bottom line - our purpose is not in lining our own pockets - this is why we do not currently have a token for our project. We believe this is a distraction - we are dialed into creating an ecosystem for everyone to flourish with our biggest goal being sustainability. Now that we have established context - let's dive into the weeds of how this is achieved. PEACEGIGA is able to produce consistent fixed returns by utilizing inflow/outflow mechanics in combination with state-of-the-art fund allocation and trailblazing asset pairing on top of the base layer of NFTs. Now you might be asking yourself, what does that even mean. On a high level, using statistical co-efficient modeling we have created a cutting-edge formula that utilizes blockchain mechanics to stretch each dollar as far as possible while remaining secure and diversified. You can find more details on this in our Back-End Diagram. With technological advancements and the creation of blockchain, this allows us and investors to track everything down to the smallest detail in a readily - easily accessible way not only making us more secure but transparent alongside. In tune with the maximization of blockchain technology, we also maximize the power of NFTs. We maximize NFT mechanics as these mechanics allow for us to accept a chain token like Binance Smart Chain (BNB) collecting a currency not controlled by us - causing zero selling pressure to our protocol. Not only are we unique in the sense of rewarding our users with a fixed amounts of stable coins we also have no selling pressure mechanics. The best part is you receive your initial ROI back in about 80 days.

Sustainability

2) How long can your project sustain itself without rewards pools?

Ever heard of a bell curve? We see this all throughout our lives but let's apply this to crypto when a project debut there is a large inflow traditionally, however, most of the time there is a peak climax at some point - now this could be in a few days, years or never. As the project grows - so does the investment pool. Now as a community we decide the dynamics of the investment pool if we never deplete it - allowing for it to continue to grow and only taking our profit. Eventually, this will become such a large amount that our new NFT collection can correspond to the revenue generated from this investment pool alone if need be. Now, this is only one aspect of our sustainability plan. Another aspect is partnerships and advertising. Have you ever seen a YouTuber place ad in a video? Have you ever seen an athlete get sponsored to wear a certain brand? Have you ever seen brands like Kith do collaborations? These are all something in the works, which will be a large revenue stream for us.

3) When does this all fall apart - what's the breaking point?

Because we don't have a token this allows for us to be incredibly precise with our calculations. What this means is because our NFT's have a fixed rate of return we know the exact impact this has on our rewards pool along with our investments pool at every point. Allowing for us to always be one step ahead as we will know significantly in advance the payout that is due.

4) What happens if NFT don't sell out? Will that break these calculations?

Nope, all of our calculations are based on inflow and outflow, this is a 1:1 ratio. If an NFT does or does not sell out this does not affect the dynamics of the project.

Sustainability

5) Can you guarantee you'll exist for 2 years?

Truly and honestly, nothing can be given certainty. However, what we can promise is we will never give up on our community. We will always continue to innovate and find more and more ways to lead innovation. There is no obstacle we are not ready to face. We are Peace Family.

6) Is there an early indicator that we are going to crash?

An early indication of this would be if our overall treasury value is substantially lower than our given output. This will be trackable using the blockchain.

7) What's the recovery?

I believe Denzel Washington said it best, one must always fall forward - if we focus all of our energy worrying about "what if" no progression can be made. However, like everything we have a plan in place if this were to ever occur. Of our 10% team fund, there is a set amount of this set aside in the project as a rainy-day fund. We will never leave our users hanging, we will always do everything we possibly can

8) How do we know whether reinvesting our funds are going to do well or not?

This decision must always be made by the user. However, every metric available to make this decision will be displayed on our dashboard.

Sustainability

1) Do we have to mint the NFT?

If you missed out on our drops you may be able to purchase an NFT via the open market.

2) When are new NFT's released?

Every month we will issue a new collection of NFT's every collection will present its own unique design and benefits.

3) Is there a limited supply of NFT?

All collections will have a limited supply.

4) How is the PEACEGIGA NFT art valued, if one was to take out the financial element?

If one were to take away the financial elements of our NFT's you would still have unique original artwork. Some from your favorite creators, athletes, brands and artists.

5) What else does the NFT offer?

Our NFT has exclusive benefits to access special events, exclusive air drops, etc.

6) Where do I sell the NFT?

You may sell your NFT's on our marketplace.

7) How does the NFT open market work?

The open market allows for users to buy and sell their limited edition NFT's as they wish. A percentage of each sale goes back to the treasury in forms of a royalty.

Sustainability

8) What if I don't want to keep the NFT?

Every user has the right to sell their NFT on the open market at any time they'd like.

9) What happens when my NFT expires?

Our NFTs truly never “expire”, only the ROI ends. Any holder of our NFTs will retain all exclusive benefits.

10) How often are airdrops for NFT holders?

There is no set frequency of air drops - we like to keep things interesting for our users.

11) Can I get a discount for buying multiple NFT's?

To keep our calculations as exact as possible there will be no discounts offered, for anyone including sponsors, influencers or even our team.

12) How long is the ROI period for each NFT?

This will vary from collection to collection but this information will always be known to our users.

13) What is the difference between NFTs and NFTs with utility?

NFTs generally are simply artwork. For instance, you could buy the newest Tom Brady NFTs and these are amazing collectables but nothing more. NFTs with utility are interesting however, this is where an NFT provides real world benefits. For instance, Coachella just launched a line of NFTs that give you access to all their events forever. This is amazing as a user can get true real-world benefits forever, while the business gets revenue from resellers without it going to StubHub or something like this. Truly using the blockchain to its highest impact.

Investments

1) What if some of the investment doesn't do as well as expected?

Diversification, Diversification, Diversification! I cannot stress this enough. On our dashboard, you will see our allocations to each style of investment. Eventually, we may have an investment not go our way, but because we will be diversified and consistently tracking our investments everything will be okay.

2) Does the community have a say in investment?

Yes! Absolutely, our community will have a say. We will be running weekly polls to see where the community stands and if they have any suggestions for investments. We will also have a message board where you can pitch us your favorite investments and we promise to take a look.

3) Where are you investing?

We will be investing in a multitude of assets talked about in our whitepaper. All of these investments will be trackable via our dashboard.

4) How can I track the rewards pool and investments pool?

Using the blockchain along with our dashboard all of this information is transparent and readily available for any of our users.

5) Now you have fully recovered your initial investment. What else is there?

Now you get to sit, relax and watch your NFT print out profit.

Claiming/Stable coin

1) Does the project have a locking period?

PEACEGIGA has absolutely no locking periods!

2) How often can I claim my rewards?

A user may claim their rewards whenever they see fit. They are always available.

3) Where can I claim my rewards?

This can be done on the “Minting & Earning” tab.

4) Are there any Fees or taxes? How much is it?

Unlike our competitors we do have maintenance fees or anything as such however we do have a Claim Tax this is our only fee. Our claim tax is 10%.

5) What's the benefit in getting rewards in stable coins?

The benefits of stable coin returns are unparalleled. Suppose you invest \$500 into a project and get back 1.50% a day in their token well with this logic you would get your ROI back in 65 days. Well, what if this token is 50%? Now your ROI time is no longer the same time period. Although you get an equal number of tokens their value is no longer the same changing your ROI period.

6) How can you even pay returns in stable coins?

We are able to pay our users in stable coins as we accept payment for our NFT's in a chain token. Allowing us to convert the chain token into stable coins without affecting our project in any harmful way.

Claiming/Stable coin

7) Why doesn't every project pay returns in stable coins?

In most cases it simply isn't possible for the project to do as such - they weren't created with this purpose. In order for a project to pay users in stable coins, they must sell their protocol token. This would cause massive selling pressure among many other issues. Here at PEACEGIGA, we were designed for this creating a new stream of market dynamics to make this possible.

8) Is there a fee associated with receiving rewards in stable coins?

Any fees associated with paying our investments with stable coins will be taken on by the project. The user pays no additional fees for being rewarded in stable coins.
